

THE COVID VACCINE for 5-17 YEAR OLDS

Is it Safe???

The FDA and CDC have found the PFIZER vaccine to be safe and have authorized its use for children 5 -17 years old.

Will my child develop a heart issue after receiving the vaccine?

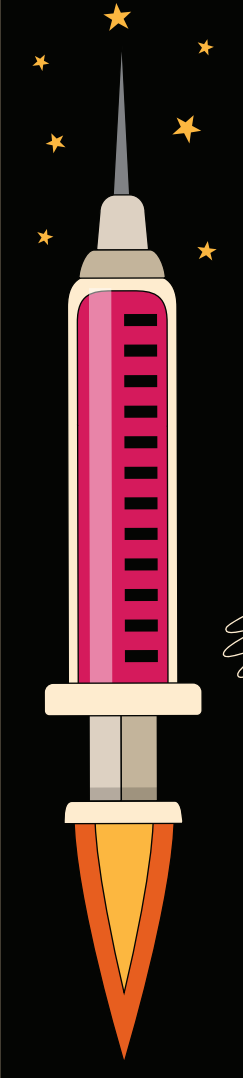

Heart issues as a side effect are **EXTREMELY** rare. Children have a greater risk of being infected with COVID that results in heart issues, than developing heart issues after receiving the vaccine.

Will the vaccine affect my child's puberty or fertility in the future?

There is **NO EVIDENCE** of any issue with puberty or fertility.

The vaccines have been studied extensively and found to be safe, just like other vaccines that have been authorized and recommended for children.
